Abstract:

PROBLEM TO BE SOLVED: To allow the communication equipment to receive an electronic mail after confirming the arrival of the electronic mail even in the case of dial-up connection.

SOLUTION: In the case that an electronic mail via the internet arrives in a host side communication equipment, a dial control section 33 makes dialing to a terminal side communication equipment 1 via a public line 2. An ID detection section 11 of the terminal side communication equipment 1 detects an ID of the host side communication equipment from the reception signal and discriminates it to be the arrival of a mail when the ID is coincident with a content of an ID registration table and a mail POP control section 13 acquires the electronic mail from the host side communication equipment through dial-up connection.
